Summary

Dedicated software engineer with 3 years of experience designing and developing small- to large-scale Web applications using object-oriented programming languages and functional languages for both **Front-end** and **Back-end** applications and mobile apps using **Flutter**

Experience

Upwork

Front-End Developer/Designer • Remote

08/2021 - 09/2021

- Redeveloped the website with Reactjs and Typescript to create a more visually appealing, user-friendly experience
- Created a test suite with jest, resulting in a higher pass rate for software application regression tests

Upwork

UX/UI Designer • Remote

02/2022 - 03/2022

- Collaborated with a team of Reactjs developers for a month on a major website redesign
 - Used Figma to design a full-stack Web application to support new features and meet the needs of existing clients
-

Skills

Javascript, Nextjs, React.js, Node.js, Html5, CSS, Python, Dart, GIT, Docker, Flutter

Education

University of Ghana

Information Science, Political Science • Accra, Ghana

06/2024

Projects

Netflix clone (Reactjs, Redux, Firebase)

- I developed a responsive UI and took advantage of React's reusable components to gain interactive and performant code.
- I managed the state of each movie with Redux, which helped me to lift the state of the app to enable other components to have access to and dispatch any state change in the app.
- used Firebase authentication to enable users to signup and log in with their email and password or sign in with Google auth and also used Firestore to store users' data.

Youtube Clone (React.js, Firebase)

- Leverage the UI with ReactJS to achieve a fast update of the user interface.

- The UI used React Query to make background fetch YouTube videos and cache them in memory in order to enhance the performance of the UI.
- They used Google auth to authorize users.
- They added some features like dark mode for authenticated users.

Link-<https://yuutube.netlify.app>

Spotify Clone (Nextjs, Tailwind, Spotify Api)

- designed and developed with CSS utility class from Tailwind to improve the apps' responsiveness and build an outstanding UI
- I used NextAuth to authenticate users with Spotify auth and to have the ability to view their playlists.
- Nextjs made it easily to render pages faster from the server to improve SEO.
